

ROOFS TO ROADS COLORADO

313175TH ST.
BOULDER, CO 80301
730-333-7416

10 Steps to Asphalt Shingle Recycling

1. Attend a Roofs 2 Roads training class. We have trainings scheduled regularly. We can also schedule a training for you and your company at your convenience.
2. Complete the questionnaire concerning your current disposal practices.
3. Your company name will now be listed on our website, and provided to the managers of collection points.
4. Each project you recycle has to be tested for asbestos by using the process outlined below.
5. When you get a contract for a roofing tear-off, take asbestos samples. 3 samples are required for each roof layer. The samples can be small, about the size of a quarter.
6. Complete the [asbestos testing form](#) and send it to the testing lab via FedEx:

URS Corporation
5 Industrial Way,
Salem, NH 03079

Roofs to Roads is covering the shipping costs. Here is an [example form](#).

7. You and Roofs to Roads will receive your report within 24 hours via e-mail. Please print out a copy of your test results to give to the gatekeeper at the collection point.
 - o If the shingles contain asbestos over 1%, Roofs to Roads will not be able to accept the shingles and they will have to be taken to an approved Asbestos Landfill.
8. Tear off the roof. Keep asphalt shingles in one receptacle and all other trash and recyclables in another receptacle. Add shingle waste from the new roof to the asphalt shingle receptacle.
9. Recycle your shingles! Proceed to the most convenient collection point.
 - o If you will be going to Brannan Sand and Gravel you must have a copy of the asbestos report for the load you are tipping to give to the gate keeper. You also must purchase a "Pit Pass" from Brannan directly before you proceed to the collection location.
 - o The Collection Location can refuse loads that are not clean. You can bring these to a landfill.
10. Enjoy the greenhouse gas reduction, the reduced disposal fees, and the green marketing benefits!
